

WHEN TO END ISOLATION

Isolation is for anyone with one or more symptoms and/or has tested positive

01

Isolate
as soon as you develop one or more symptoms, even if mild:

- Fever
- Chills
- Shortness of breath
- Cough
- Diarrhea
- Abdominal pain
- Vomiting
- Fatigue
- Joint pain
- Muscle aches
- New rash
- Loss of smell/taste
- Sore throat
- Headache
- New congestion
- New runny nose

Isolate:
You tested positive for COVID-19 with no symptoms

02

Chronic Symptom Exemption

Yes:
Your clinician has completed a return-to-school form saying your symptoms are chronic and are not new.
You may return to school.

No:
You do not have a chronic condition.

03

Get tested for COVID-19 as soon as possible

Negative Test
Positive Test with Symptoms:
You must isolate for 10 days. You may return to school after completing a 10 day isolation since your first symptom, have been fever free for 24 hours, and symptoms are resolving

No Test

Positive Test No Symptoms:
You must isolate for 10 days following your test or 10 days after symptoms start (if symptoms develop after testing)

04

Criteria to Meet to Return to School

You received a **NEGATIVE** molecular test for COVID-19, have been fever free for 24 hours, and symptoms are resolving

You received a **POSITIVE** molecular test for COVID-19, completed a 10 day isolation since your first symptom(s) or positive test, have been fever free for 24 hours, and symptoms are resolving

You did not take a COVID-19 test, but completed a 10 day isolation, have been fever free for 24 hours, and symptoms are resolving
